Bare Metal Cloud

Focus on your business while we manage your infrastructure

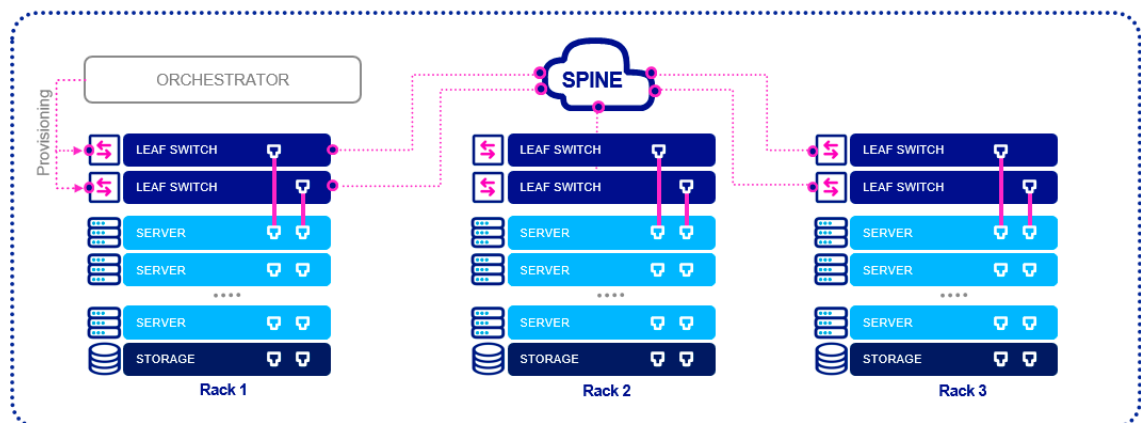

Modern applications increasingly require better performance, low latency, and storage capacity.

Agility is key

As applications become even more dynamic and essential to businesses, optimizing performance becomes critical. Bare Metal Cloud offers on-demand, real-time dedicated servers, providing companies with continuous support on their paths to digital transformation.

No limits, for a new generation of applications

In a work environment where digital transformation is rapidly evolving, aligning with market demands and adopting next-gen apps to ensure competitiveness is key. Our offer allows you to considerably reduce latency, maximize performance and orchestration control.

Benefits

Faster time to market

The service accelerates IT solutions' time to market, providing access to a broad range of dedicated servers that can be managed using the cloud's usual flexibility.

Minimum latency, maximum security

Reduces latency and enhances security of servers hosted at Cirion's Data Centers – close to users and in compliance with the highest international certification demands (TIERIII, ISO, ISAE, PCI).

Scope

- Redundant architecture.
- Highly scalable infrastructure.
- High-performance servers.
- High-speed networking.
- Provisioning portal.
- Pay-as-you-go or resource reservation billing.

What your company needs, in the terms it needs

Every organization is its own world, with specific demands and budgets. Bare Metal Cloud offers different server configurations, multiple types and versions of operating systems, and pricing models adapted to each business' specific needs to provide maximum performance and cost control.

Security first

Our offer is based on single tenancy to protect customers' data with unique firewall policies, multi-factor authentication, and access adjustments across different features and groups.

Features and specifications

Broad range of computing capabilities

- From 8 to 64 cores
- From 128 GB to 1 TB RAM
- LAN Connectivity at 10 Gbps
- Software licenses can be provided by Cirion or customer.

Why choose Cirion?

Performance

We optimize your workloads using the broad range and capacity of our servers.

Reliability

The service counts on high levels of availability thanks to its redundant architecture and the location of its nodes in Cirion's main regional Data Centers.

Flexibility

Deploy resources in minutes through our service portal and select the payment model best suited to your needs.

Security

Physically isolate your data, application, and other resources, obtaining higher levels of privacy than those offered by a shared environment.
