MPLS / IP VPN

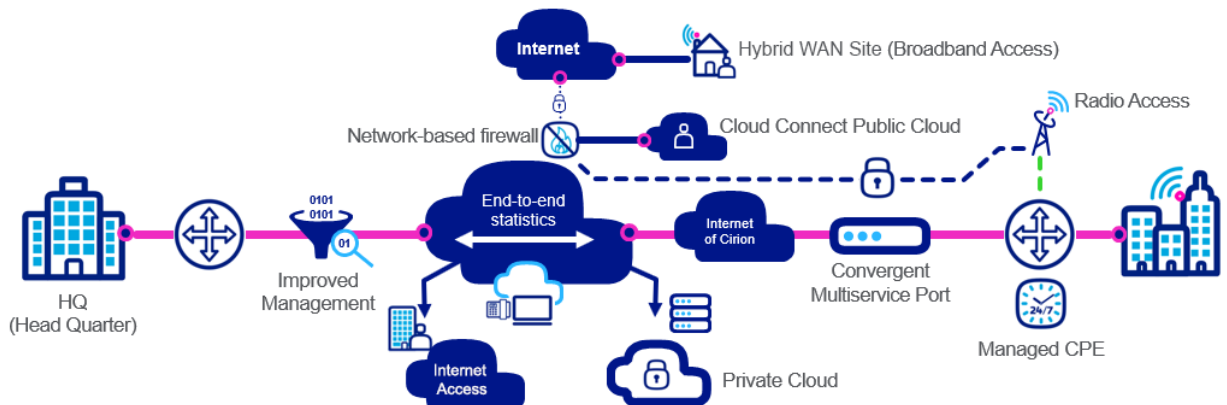

Connectivity across Latin America with local support

Our IP VPN service delivers full-mesh connectivity over multiple connection types. Flexible, secure, and cloud-friendly.

MPLS/IP VPN: we align your network to your business demands

High performance, global, private network to interconnect all your locations in Latin America and worldwide. Our self-service intuitive functions will deliver quick response to your business changing needs. Furthermore, automation will provide more accuracy, productivity and centralized management for improved administration. With MPLS/IP VPN we take your network's flexibility and dynamism to a completely new level.

Data are constantly moving - traveling from applications where they are captured to the data center and from the cloud to the edge. Your business depends on being accessed, processed and used by the right person, at the right time from the device of their choice.

Benefits

Scope and availability

Direct connect in the main Latin American countries, facilitating customers' business expansion.

Quality of service

Cirion's IP VPN delivers end-to-end service quality to ensure appropriate data packages classification.

Reliability

Guaranteed SLAs that provide high performance for customers' WAN Network.

Integration

Integration with other services in a holistic solution to achieve maximum flexibility and higher ROI.

End to end, limitless diversity

We fulfill all your needs from end to end. We deliver a broad diversity of integrated accesses for an extremely resilient network. Inside and outside network accesses are included, PoP, edge equipment -both provider's (PE) and Customer's (CE), and routers (PE).

Dynamic and automated modernization

Your business needs change at full speed. We deliver flexible and nimble solutions for an enhanced service, from SD-WAN and network security to managed services and dynamic connections on the IP VPN cloud, and more. Based on our estimates, new locations can be added to your network 12% faster*.

* Measured in North America. For legacy MPLS/IP VPN locations service delivery average days are compared. Timelines vary according to service location configuration.

Features and specifications

Network connections

- Flexible class of Service and billing models.
- Service Level Agreements (SLAs), PoP-to-PoP/end to end.
- Direct connectivity capacities to public and private cloud with Cirion Cloud Connect.
- Broad variety of access methods to enhance flexibility and cost savings.
- 10Mbps to 30Gbps Ethernet speeds (not available everywhere).
- Multiple Voice, Internet services are admitted on a shared VPN port and access circuit.

Network Management and Visibility

- Statistics of packet delivery jitter, latency, availability and performance.
- Customer edge to computer edge measurements.
- Vendor edge to vendor edge measurements.
- Network map view.
- Almost real-time views of network, SLA metrics and network management through our secure 24/7 portal.
- Proactive supervision and notification reports.
